

RESIDENTIAL GENERATORS

Portable

A portable generator may not need a permit; however an electrical permit **is required** for installation of a transfer switch, interlocking mechanism, and generator receptacle.

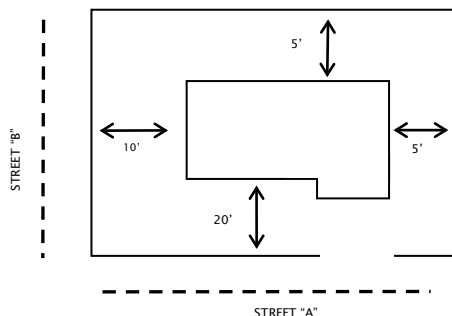

Permanent

Adhere to all Manufacturer Installation Guidelines

A permanently installed generator will require both an **electrical permit** for adding a transfer switch and a **mechanical permit** for fuel (natural gas/LP) piping and connections. Both the mechanical and electrical final inspections may be scheduled on the same day.

Setbacks

A permanently installed generator is **not allowed** to be placed within required yards (setbacks). Front yard setback is 20 feet side* and rear yard setbacks are five feet from the property line.

**except on corner lots – see diagram*
